For Immediate Release

### **JETNET Offers Commercial Airliner Fleet Subscription Services**

UTICA, NY – JETNET LLC, the world leader in aviation market intelligence, is now offering their new Commercial Airliner fleet subscription service, also known as “Big Planes”. JETNET Commercial Airliner will complement their business aircraft and helicopter subscription services, bringing together the “complete trio” of aviation fleet information.

Since acquiring Aviation Data Services, Inc. (AvData) in 2004, JETNET has continued to research worldwide commercial airline fleet data. AvData had its beginnings in October 1966 in Wichita, Kansas, and was one of the early pioneers that started the capture, analysis and dissemination of aviation fleet information and intelligence through the use of a worldwide reporting system.

“We are very pleased to present our “Big Planes” service to the worldwide commercial aviation marketplace,” said Vincent Esposito, JETNET President. “That includes widebody (twin aisle), narrowbody (single aisle), freighter and regional (under 100 seat) jet airliners, along with commuter turboprops.”

Since 2004 the commercial airline fleet data has been maintained under an annual single-source contract services agreement. JETNET is now offering the airliner aircraft fleet data through its real-time internet-accessed Evolution program, combined with both business aircraft and helicopters. The total fleet is comprised of nearly 100,000 in-operation airframes, 35,000 of which are airliners.

JETNET’s services meet and exceed the industry’s requirements to provide timely, accurate data and information on these dynamic fleets, a critical service for aircraft professionals. The company routinely assists its clients, whether airframe manufacturers, maintenance and repair shops or financial institutions with special studies. These include services such as market analysis, product and business plan evaluation, fleet aging and ownership trends, and market projections.

Current JETNET clients include major airframe and powerplant manufacturers, service and maintenance organizations, aircraft finance and leasing companies, and dealers and brokers. JETNET is a resource employed by various aviation regulatory agencies throughout the world, and many others who require data on these aircraft populations. They are also regularly cited by trade and national media outlets.

“The ways in which JETNET can assist you and your organization are virtually limitless”, said Lucia Frontera, JETNET’s Director of Market Research. “We recognize that each client has a unique set of requirements. What they share is the need for timely, accurate, complete fleet information, backed by the best aviation research organization in the world.”

The heart of JETNET’s market research is their 45-person multilingual research team in Utica, NY, actively calling aircraft operators in order to maintain real-time updates to JETNET’s nearly 100,000 aircraft database.
